## **DETAILED ACTION**

### ***Response to Amendment***

1. The following Office Action is responsive to the amendments and remarks received on December 6, 2011.

### ***Allowable Subject Matter***

2. Claims 1-18 and 20-28 are allowed.

3. The following is an examiner's statement of reasons for allowance: The prior art fails to teach a display generating a three dimensional image using groups of pixels, with each pixel in a group corresponding to a particular viewing angle, with a color compensation device, "wherein said correction applied to each of the plurality of pixels within the group comprises: applying a red pixel colour correction factor to each red pixel within the group, wherein the red pixel colour correction factor varies according to a pixel position within the group, applying a blue pixel colour correction factor to each blue pixel within the group, wherein the blue pixel colour correction factor varies according to a pixel position within the group, applying a green pixel colour correction factor to each green pixel within the group, wherein the green pixel colour correction factor varies according to a pixel position within the group, wherein the red pixel colour correction factor is different from the blue color pixel correction factor and the green pixel colour correction factor, and wherein the blue colour correction factor is different from the green colour correction factor." The prior art to Marz (and others, i.e. Matsumoto et al., US PGPub 2003/0052836) teaches applying a generic gray scale correction to all pixels to ensure that all viewing angles can be seen equally well, thus

teaching that the correction factor applied to each pixel in a group would be different based on the difference in viewing angle degradation of the image. However, Marz does not teach correcting the color of the pixels, and rather teaches using a color filter to generate the necessary colors on the displayed image. Although it is known in the art to apply separate correction factors based on pixel location, including in displays with multiple separately colored pixels, i.e. as taught by Andrade et al. (US Patent No. 6,954,193) and others, such displays are not compatible with the three dimensional display having a group of pixels, each displaying a separate viewing angle, as taught in the present invention. There is no teaching or suggestion to combine such color correction methods with the three dimensional display structure of the present invention, and based on the incompatibility of the different technology types, there is also no motivation in the prior art to combine such a display structure and driving scheme with the color correction method as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
